

# Ventilation is Vital

## ***Don't let your profits explode!***

It is Extremely important that every Outdoor Kitchen/Island structure is properly ventilated. Highly flammable gas that fuels the BBQ can become trapped in poorly ventilated or non-ventilated Outdoor Kitchens, creating a possible catastrophe that can cause bodily injuries and major damage to the countertop tiles, the base structure, and even the steel components such as the grill, doors, and drawers. Bull has your venting solutions with our stainless steel vented doors and venting packages.
